INSTRUCTIONAL ORDER

While examining a tender case for laying of sewer lines, it has come to notice that tenders in the sewerage sector are being invited on the old pattern, where bidders are advised to quote their percentage rates in a composite form over the estimated amount of BOQ which comprises both the items of laying the pipelines by open cut method and through trenchless technology. Whereas in the Water sector bidders are required to quote their rates separately for trenchless technology on item rate basis and on rest of the BOQ on percentage rate basis.

In order to remove the disparity, all divisions dealing with sewerage works are directed to stipulate clearly in their NITs that bidders will be required to quote their rates separately for the items of laying of pipe lines through trenchless technology and for the balance items of BOQ, rates will continue to be invited on percentage rate basis. Accordingly, BOQs of each tender of laying of sewer pipe lines will also be prepared in a manner where quantum of item of laying the pipes through trenchless technology is indicated separately.
