Dated : 15.09.2015

INSTRUCTIONAL ORDER

It has been observed that during plying of water tankers from water emergencies up to the designated point, a lot of water spills over which causes wastage of water and gives bad name to Delhi Jal Board. It is also observed that people including children climb over the tanker and fetch water after opening the lid which can cause accident as well as contamination of water. To avoid these situations, following instructions are issued for strict compliances:

1. After filling the container at water emergencies/filling stations, all the lids of containers shall be properly closed and locked to prevent spill over of water on the way.
2. All the leakages from the sluice valves of filling point should be plugged and valves are water tight.
3. The quality of water should be checked and ensured by the in-charge before dispatch of water tanker from water emergency.
4. The water should be allowed to draw from the tanker through water taps fixed on mounted tanker.
5. Nobody should be allowed to climb over the water tanker in any case to avoid accident.
6. The water saved from the supply points should not be wasted. This will be used during the next trip or in case the tanker is washed the water should be discharged into the existing Rain Water Harvesting System at water emergencies. In case, there is no Rain water Harvesting System at the water emergencies, it should be constructed.
